

## FLIGHT *Control* v3.9.1

### Release Notes

- Updates to FLIGHT Control Projects interface
- Updates to FLIGHT Control interface
- Running simulations: improved performance by using “FastRestart” functionality.
- User can reinitialize parameters from constants file using “Re-Initialize Parameters” push button on main window:
  - If “All” is selected - all parameters from the selected parameters tab (e.g. Synthesis OR Requirements) will be reinitialized to the values in the constants file (which are defined in the model workspace of the Simulink model).
  - If “Selected Parameter” is selected – only the selected row in the parameters tab will be reinitialized to the value in the constants file (which is defined in the model workspace of the Simulink model).
  - Note: User Defined Parameters cannot be reinitialized
- Bug fixes in Gain Scheduling Window
